Amendments to the Claims:

The following listing of claims replaces all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1 - 7 (Canceled)

8. (New)   A method of creating an IC card that is carried by an IC card creation entrusted company server, wherein:

said IC card creation entrusted company server previously registers advance registration information data which include at least one template information in relation to at least one application stored in the IC card;

said IC card creation entrusted company server receiving IC card setting data composed of card basic information data including individual information and IC card unique information assigning data including at least one application assigning information;

said IC card creation entrusted company server taking out said template information which is previously registered with respect to each application, in accordance with said application

assigning information which is included in said IC card setting

data;

said IC card creation entrusted company server

combining said card basic information data with the taken template

information to create loading data with respect to each

application; and

said IC card creation entrusted company server merging

the loading data of each application to produce

the IC card creation data.

9. (New) A method of creating an IC card that is carried

by an IC card creation entrusted company server and an IC card

creation company server, wherein:

said IC card creation entrusted company server previously

registers advance registration information data which include at

least one template information in relation to at least one

application stored in the IC card;

said IC card creation entrusted company server receiving

IC card setting data composed of card basic information data

including individual information and IC card unique information

assigning data including at least one application assigning information;

said IC card creation entrusted company server taking out said template information which is previously registered with respect to each application, in accordance with said application assigning information which is included in said IC card setting data;

said IC card creation entrusted company server combining said card basic information data with the taken template information to create loading data with respect to each application;

said IC card creation entrusted company server merging the loading data of each application to produce the IC card creation data;

said IC card creation entrusted company server transmitting said IC card creation data to said IC card creation company server; and

said IC card creation company server loading said IC card creation data to an chip of the IC card to create the IC card.

10. (New) A system for creating an IC card that comprises an IC card creation entrusted company server, wherein said IC card creation entrusted company server comprises:

a database for previously registering advance
registration information data which includes at least one template
information in relation to at least one application stored in the
IC card;

receiving means for receiving IC card setting data
composed of card basic information data including individual
information and IC card unique information assigning data
including at least one application assigning information;

taking means for taking out said template information
which is previously registered with respect to each application,
in accordance with said application assigning information which is
included in said IC card setting data;

combining means for combining said card basic
information data with the taken template information to create
loading data with respect to each application;

merging means for merging the loading data of each
application to produce the IC card creation data; and

transmitting means for transmitting said IC card
creation data to said IC card creation company server;

said IC card creation company server comprising
loading means for loading said IC card creation data to a chip of

the IC card to create said IC card.

11. (New) A program for creating an IC card, wherein an IC card creation entrusted company server comprises the functions of:

previously registering advance registration information data which includes at least one template information in relation to at least one application stored in the IC card;

receiving IC card setting data composed of card basic information data including individual information and IC card unique information assigning data including at least one application assigning information;

taking out said template information which is previously registered with respect to each application, in accordance with said application assigning information which is included in said IC card setting data;

combining said card basic information data with the taken template information to create loading data with respect to each application;

merging the loading data of each application to produce the IC card creation data; and

loading said IC card creation data to a chip of the IC

card to create said IC card.
